

A collection of Tools and Utilities for the MYOB RetailManager[®] database

Tools Include:

- **Customer e:Mailout** allows you to create and send e-mails to your customer list.*
- **Mailout Export** creates a mail out list of your customers.
- The **Mass Delete** tool deletes stock items, package codes and customers.
- The **Data Editor** allows you to easily edit a range of customers or stock items.
- **Price Rounding** allows you to selectively round sell prices.*

Utilities Include:

- **Clone Database** allows you to create a Complete or Partial Clone of your database.
- **Password Reminder** will inform you of the shopfront password.

Tools

Customer e:Mailout

Customer e:Mailout allows you to create and send e-mails to your customer list. You can select all or just a specific group of your customers, type the e-mail using either **Plain Text or HTML format**, attach a file (e.g. catalogue, brochure, picture or sound) and send the e-mail to your customers simultaneously. With the selection criteria you can target a specific group of customers.

Mailout Export

Mailout Export creates a mail out list of all or a select group of your customers based on the selection criteria that you set; the text file created is compatible with Microsoft[®] Excel.

Data Editor

The Data Editor allows you to easily edit a range of customers or stock items, selectively re-price, rename or re-categorise thousands of stock items in seconds.

Did You Know? Cooking and RM-MultiStore are written by Two Tongue Technology Pty Ltd (formerly Blue Tongue Technology winners of the 1998 Channel 9 Small Business Show Business Software Awards). In 1999, MYOB Australia purchased our award-winning software Digi~Till[™], after being upgraded and enhanced, it's now called MYOB RetailManager[®].

Mass Delete

The Mass Delete tool deletes stock items, package codes and customers. After a period of time your MYOB RetailManager® database may end up with thousands of **old stock items** that have not been active for years making the stock list unnecessarily large. Just select the Stock Filter then choose to either **delete or merge the records**. If a stock item is on order, on layby, a package item or does not have a zero quantity then it cannot be deleted.

Price Rounding

Price Rounding allows you to selectively **round the sell price** (including tax) to the nearest user defined value. When used with the Data Editor, it's a fantastic tool for resetting thousands of prices in your MYOB RetailManager® database whenever there is a price change, without ending up with an RRP of \$3.91 or \$99.62 and without having to manually check every price.

Utilities

There are two components to the database utilities:

- **Clone Database** allows you to create a Complete or Partial Clone of your MYOB RetailManager database. The **Complete Clone** allows you to make copies of databases that have corruptions within their structure. As the data is copied record by record most "bad" records will be ignored, the database "relationships" are recreated rather than copied and a cleaner database should result. The Complete Clone also has an option to **merge your Recent, Archive and Offline files** effectively un-archiving your database.

The **Partial Clone** creates the database by stripping away all transactions based on your selection criteria. When you open a new store you may wish to partially clone your existing database to keep the stock items but remove the sales history, stock on hand, customers etc. as they would not be relevant to a new store.

- **Password Reminder** informs you of the shopfront password.

Minimum System Requirements: PC with Pentium® III processor @ 800 MHz, 256 MB RAM, 8 Gigabyte Hard disk.

Operating Systems: Microsoft® Windows 98, 2000, XP or Vista.

Compatibility: MYOB RetailManager® versions 4.3 through to 11.

Price: \$399 inc. GST.

* Customer e:Mailout requires Outlook®, Outlook Express or Windows® Mail to be set as the Default Mail Client.

* Price Rounding is restricted to prices that can be rounded after GST has been added.

Other Solutions from Two Tongue Technology:

RM-MultiStore is an easy to use head office data aggregation tool that allows retailers with multiple stores using MYOB RetailManager® to send data from each store back to one or more head offices. Ideally suited to small to medium enterprises, RM-MultiStore is Wide Area Network software which uses the Internet for communication and therefore is inexpensive to operate, gives you a single point of control, and best of all it works seamlessly with MYOB RetailManager®.
