There are better ways to stocktake

RM Stock

For MYOB RetailManager

Electronic stocktaking

Electronic purchase ordering

Electronic goods receiving

Electronic returned goods

Electronic sales orders

How do you measure and monitor your investment in stock?

Stocking your retail stores represents one of the largest financial investments in your business. Effectively managing your investment can make or break your business.

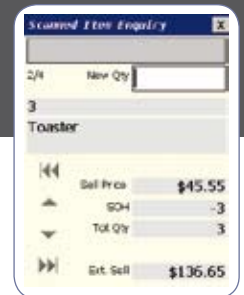

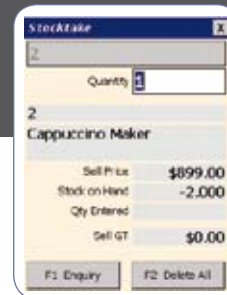

How do you measure and monitor your investment in stock?

RM Stock is a stock management solution that works in conjunction with Australia's number one selling retail point of sale solution MYOB RetailManager.

RM Stock and MYOB RetailManager provide you with the tools to effectively maintain and manage stock to ensure that you are achieving suitable returns on investment.

The RM Stock solution is designed to save you time by streamlining necessary tasks such as stocktaking, processing purchase orders and receiving goods as well as assisting with the operation of your business by providing you with:

- Accurate stock on hand figures
- Accurate value of stock figures
- Accurate sales reporting
- Shrinkage control
- Accurate point of sale system data

Automating Manual Stock Management Processes

- Faster stocktaking
- No more pen and paper processes
- Reduces stocktaking costs
- Reduces staff frustration
- More accurate stocktake
- Quicker order processing and management

Electronic Stocktaking

RM Stock gives you the power to automate full or partial stocktakes by utilising the power of barcodes. Stocktakes are conducted where your products are located and integrate with MYOB RetailManager via the RM Stock software.

Purchase Ordering

RM Stock gives you the ability to create a supplier purchase order by simply scanning the barcode on the products you wish to reorder and entering the quantity required. The collated order is uploaded to MYOB RetailManager easily via the RM Stock software.

Goods Receiving

Processing received goods has never been easier. Scan the barcodes of the products you have received and upload the information in to MYOB RetailManager via the RM Stock software.

Sales Orders

When it is not practical to take a customers goods to the point of sale, RM Stock allows you to scan the items using the portable terminal and then upload into RetailManager to create a Sales Order. This may then be recalled and the transaction completed.

Returned Goods

Items to be returned to a supplier may be scanned with the portable terminal and uploaded into RetailManager to create a Returned Goods transaction.

Price Checking

RM Stock allows you to check prices of products no matter where the products are located by simply scanning the product barcode. The price of the particular product is then displayed on the portable terminal.

How It Works

There are two essential components to the RM Stock solution.

- **RM Stock Software**
- **Mobile Data Terminal**

The RM Stock software is the communication and control centre interface between your MYOB RetailManager software and the mobile data terminal.

With a choice of three compatible data terminals for a range of environments, RM Stock allows you to stocktake efficiently by scanning barcodes and entering data directly into the terminals from anywhere within your business.

The RM Stock software communicates with MYOB RetailManager to transport stock information to the mobile data terminal. This allows you to browse your store, scan product barcodes and amend stock on hand figures. Once you have completed the stock management tasks MYOB RetailManager data is updated via the RM Stock control centre.

RM Stock Basic Datalogic F725 Terminal

- Small size stores - < 5,000 items
- Pistol grip – Minimises operator fatigue
- Mono LCD screen
- Robust design
- Keyboard operation
- 2mb on board memory
- Communication/Charging cradle connection

RM Stock Performance Datalogic Memor Terminal

- Medium size stores - > 5,000 items
- Palm held
- Pocket sized
- One handed operation
- Colour screen
- Robust design
- Windows CE 5.0 operating system
- Touch screen & programmed keyboard operation
- 64mb on board memory – expandable to 128mb
- Direct power and communications connection

RM Stock Premium Datalogic Skorpio Terminal

- Large stores - > 7,000 items
- Ergonomic pistol grip – Minimises operator fatigue
- Large colour screen
- Robust design
- Compact, well balanced and lightweight
- Windows CE 5.0 operating system
- Touch screen & programmed keyboard operation
- 64mb on board memory – ability to extend to 128mb
- Direct power and communications connection
- Green spot good barcode read indicator
